

ADME NTP Study S0073 2-Hydroxy-4-methoxybenzophenone

The contractor abbreviated the test article as HMB.

Sex/Species: male F344 rats.

Vehicle: intravenous, ethanol:Emulphor:water (5:2:3, v/v); oral, corn oil; dermal, ethanol or lotion.

CASRN 131-57-7

Radiolabeled with carbon-14 in the rings; 2-Hydroxy-4-methoxybenzophenone, [ring-UL-¹⁴C]

Studies Performed:

- Single 3, 30, or 300 mg/kg oral gavage dose to rats with sacrifice 72 hours postdose. (actual concentrations: 3.01, 28.1, or 293 mg/kg, respectively; n=3 per dose; Experiment A).
- Single 4.63 mg/kg intravenous dose to rats with sacrifice 5, 15, 30, and 60 minutes and 2, 4, 8, 24, and 72 hours postdose (Experiment B).
- Single 3000 mg/kg oral gavage dose to rats with sacrifice 72 hours postdose (actual dose 2560 mg/kg; n=4; Experiment C).
- Single 4.46 mg/kg intravenous dose to rats with sacrifice 4 hours postdose (bile excretion; n=4; Experiment E).
- Single 0.0516, 2.04, or 0.800 mg/rat dermal dose in ethanol vehicle with covered dose site and sacrifice at 0, 4, 24, or 72 hours postdose (0.00360, 0.0135, and 0.0127 mCi, respectively; 0.25, 1, or 4 % HMB, respectively; n=3; Experiment F).
- Single 0.05, 02, or 0.8 mg/rat dermal dose in lotion vehicle with covered dose site and sacrifice at 2, 6, 24, or 72 hours postdose (see Table 6 for actual nCi in dose; 0.25, 1, or 4 % HMB, respectively; n=3; Experiment G).

The suntan lotion vehicle was formulated as follows: Part A (5.0 g lanolin, 2.5 g white petroleum, 4.0 g stearic acid, and 0.05 g propylparaben) and Part B (5.0 mL propylene glycol, 0.1 g methylparaben, 1.0 mL triethanolamine, 0.05 sodium edetate; and 74.3 mL water) were heated, mixed, and allowed to cool to room temperature. After cooling 8 mL of water was added and the preparation was mixed thoroughly. For dosing, the lotion was drawn into one syringe, non-radiolabeled HMB and radiolabeled HMB were drawn together into a second syringe. The two syringes were connected by a stopcock valve and the dose administered, mixed, by alternating pushing of the plungers. The medium- and high-dose doses were not homogeneous by this dosing method so the results were expressed as % dose.

Toxicokinetics:

Pharmacokinetic half-lives were estimated with modified forms of the NONLIN (Metzler CM, Elfring GL, and McEwen AJ. A package of computer programs for pharmacokinetic modeling. Biometrics 30:562-563, 1974) and CSTRIP (Sedman AJ, and Wagner TG CSTRIP, a Fortran IV computer program for obtaining initial polyexponential parameter estimates. J. Pharm. Sci. 65:1006-1010, 1976) programs. The data were fitted to three-compartment open models. Statistical weights were determined from the measured concentrations.

Note on Accessibility: Persons with disabilities or using assistive technology may find some documents are not fully accessible. For assistance, contact [Central Data Management](#) or use our [contact form](#) and identify the documents/pages for which access is required. We will assist you in accessing the content of the files. NIEHS has helpful information on accessibility.

Table 1 (Experiments A and D)

Disposition of Radioactivity from [¹⁴C] HMB in Rats Dosed Orally

		Dose

^aA larger amount of radioactivity was administered to these rats. For comparison with the dose of 293 mg/kg, the values should be divided by a factor of 8.7. Corresponding factors for 28.1 mg/kg and 3.01 mg/kg are 8.6 and 9.4, respectively.

^bExcluding cage rinses.

^c-, Not applicable or not determined.

^dConsidered to be 50% of body weight.

^eConsidered to be 7% of body weight.

^fConsidered to be 16% of body weight.

^gConsidered to be 5% of body weight. Not included in totals.

^hConsidered to be 9% of body weight.

^a A smaller amount of radioactivity was administered to these rats. For comparison with the medium dose, these values should be multiplied by a factor of 3.75 and, for comparison with the high dose, by a factor of 3.53.^b These values were calculated for six rats per group. All the other values are for three rats per group.^c -, not applicable or not determined.^d Excluding cage rinses.^e Considered to be 50% of body weight.^f Considered to be 7% of body weight.^g Considered to be 16% of body weight.^h Considered to be 5% of body weight. Not included in totals.ⁱ Considered to be 9% of body weight.

^aThe actual amount applied was 0.0588 mg.

^bValues derived for 6 rats; all other values are for 3 rats.

^cConsidered to be 7% of body weight.

^dConsidered to be 5% of body weight. Not included in totals.

^eConsidered to be 9% of body weight.

^fThis rat may have been dosed twice.
